

# IMPORTANT FEATURES OF NETBALL SHOES

## 1. CUSHIONING

When stopping suddenly to shoot or pass during play, the force applied to your feet and legs can exceed your body weight by up to 6 times. That's a lot of stress – so cushioning is one of the most critical features of a netball shoe.

## 2. TRACTION

Netball can be played on a variety of different surfaces. A good outersole will allow you to pivot easier, provide grip and will ensure the shoe lasts longer.

## 3. STABILITY

With so many stopping, starting and jarring actions, stability is critical in a good netball shoe. Look for a shoe which allows your foot to sit down inside the shoe and has a firm heel counter.

## 4. SHOCK ABSORPTION

With so much pressure on your feet, adding an innersole can help to provide you with extra support and cushioning.

Our Fit Technicians can assist you to identify the important features of netball shoes for your foot and activity. They're the experts when it comes to fitting shoes correctly. Using our exclusive Fitprint technology, they can access your individual foot type against your footwear requirements and recommend the right netball shoes that will provide you with maximum comfort and support.

# GEL NETBURNER 15

kids \$99<sup>95</sup> adults \$169<sup>95</sup>

The ASICS GEL Netburner 15 is tough and durable to withstand heavy wear and tear from one of the most demanding sports on footwear.

The most stable shoe in the ASICS range, it is the only netball shoe with Plus 3, an extra 3mm in heel gradient, perfect for players that experience high levels of strain on their Achilles tendon during play. Durability has been increased with AHAR outsole and a stitched toe to guard against drag.

# GEL NETBURNER SUPER 3

kids \$119<sup>95</sup> adults \$199<sup>95</sup>

The GEL Netburner Super 3, by far the most advanced shoe in the ASICS range, this shoe is faster, lighter for those players who need both support and cushioning.

ASICS Clutch Collar system combined with Dual PHF allows the rear of the shoe to customise itself to the individual heel shape of the wearer. These features enhance fit and reduces the potential of irritation and discomfort.
